

OCD Study: Looking at Decreasing Teen Anxiety

Teen Obsessive Compulsive Disorder (OCD) Study

change the outcome*

CCHMC IRB # 2009-0148: V1

What

This is a research study to evaluate whether the use of transcranial magnetic stimulation (TMS) – a noninvasive hand-held magnet put gently over the scalp to stimulate brain activity – may help children with OCD feel less anxious.

Who

Teens 12 to 17 years old who have been diagnosed with OCD may be eligible to participate.

Pay

Families will be paid for time and travel.

Details
